# Steven Gu

steven-gu.com | stevengu2024@u.northwestern.edu | 551-223-7773 | steven-gu | theogguu

## Education & Certifications

**M.S. Computer Science** — *Northwestern University* JUN 2024
**B.A. Biological Sciences** — *Northwestern University* JUN 2024
**GPA — 3.78/4.00**
**ISTQB Certified Tester** Foundation Level OCT 2024

## Skills

| | |
|---|---|
| **Languages** | Python, JavaScript, Java, TypeScript, C#, C++, C, R |
| **Web Dev** | MongoDB, Express.js, React, Node.js, Next.js, Django, Flask, PostgreSQL, SQL, HTML/CSS |
| **Testing & DevOps** | Cypress, Vitest, PostMan, Pytest, AWS, Firebase, Snowflake, Microservices, GitHub Actions, CI/CD |
| **Other** | Bash, Shell, Scripting, Linux, REST API, Git, Data Structures and Algorithms, Networks, Agile, AI/ML |

## Work Experience

**Systems Integration Engineer —Mercedes-Benz R&D, NVIDIA (Contract)** **DEC 2024 — Present**
- Diagnose and resolve critical software defects across Mercedes vehicle and backend systems, identifying root causes and implementing configuration fixes.
- Coordinate test car software integration to meet aggressive testing deadlines for Mercedes-Benz and NVIDIA.
- Integration testing and defect reporting across Mercedes vehicle systems, validating ADAS, infotainment, and safety functions.

**Automation Test Engineer —Porsche Engineering (Contract)** **JULY 2024 — DEC 2024**
- **Successfully proposed automated test suite project to Porsche executives, establishing automated testing operations in Long Beach.**
- Built an internal Python test suite automation project using Pytest on automotive test benches, writing smoke, regression, and functional tests covering navigation, voice assistant, and car alarm functions.

**Software Engineering Intern —New Muses Project (nonprofit)** **JULY 2023 — OCT 2023**
- Automated a continuous integration and deployment (CI/CD) pipeline with Cypress tests on GitHub Actions.
- Created a React.js component library and worked on 10+ components to design specifications to standardize future webpage development.
- Developed Python Flask-based API endpoints for a MongoDB database to support complex operations.

**Fullstack Software Engineer — NU Campus Kitchens** **APR 2023 — JUN 2023**
- Led agile development on a JavaScript Node.js web application to manage food inventory, shift records, and user records for Northwestern University's Campus Kitchen.
- Architectured a relational MySQL database and developed RESTful API to interact with database safely.
- Deployed Node.js backend to AWS, using EC2, S3, and RDS (MySQL) microservices to support scalable data storage and reliable uptime.

## Projects

**Crafty — Developer** **SEP 2023 — DEC 2023**
- Built an AI GPT-powered webservice dedicated to assisting users in woodworking projects by providing verified instructions, materials, and purchase links given a query (e.g. "help me build a coffee table").
- Integrated GPT function calling to prompt webscraping and Home Depot API calls on corresponding queries.
